

ADVANTAGES

- Easy maintenance and repair
- Special maintenance table
- Equipped with Mud and Stairs climbing tires
- Fully protected frame
- All surfaces in contact with the material are stainless steel and aluminum
- Enhanced air separator
- Equipped compressed air filter/pressure regulator and lubricator
- Performance is not affected by cold weather
- Plc control with 7-inch LCD touchscreen panel
- The entire injection process can be recorded and monitored instantly
- On time injection pressures and flow can be control
- The injection process can be documented
- A and B materials will be monitored with high pressure in line flow meters to ensure the mixing ratio is rightInjection pressures are controlled separately on the machine and the injection gun
- The temperature of injection materials can be monitored
- This machine can be used for acrylic/polyurethane/silicate materials by changing the injection gun
- Fully automatic injection gun for Polyurethane injection (2c machine)

TECHNICAL DATA SHEET

Working Pressure	0-100 bar.
Voltage	110/220 V
Delivery Rate	6-8 lt/min.
Air Pressure	Max. 8 bar
Mixing Pressure	1:1
Dimensions	45 cm x 55 cm x 90 cm
Weight	60 kg.
